

PRODUCT INFORMATION

HI-LUBE OILS

- HI-LUBE grades are high quality lubricating oils intended for general lubrication of industrial machinery. They are manufactured from selected base stocks and fortified with additives like antiwear and antirust. They are specially developed for steel mill general purpose lubrication.
- HI-LUBE oils contain film strength and anti-rust additives and provide good oiliness for general lubrication of machinery even under boundary lubrication conditions. These oils maintain a thin file of oil under light and medium loads and provide protection against corrosion and rust even during ideal periods.
- HI-LUBE oils are recommended for all types of industrial machinery using once-through lubrication systems. These oils are recommended for use in the lubrication system machine tools, textile machinery and other machine parts which are lubricated by a thin film of oil.
- HI-LUBE grades are general purpose lubricants for 'once through' application situation in textile mills, paper mills and machine tools. The grades are used in steel mills.

PERFORMANCE BENEFITS

- Excellent oil film strength
- Very good oiliness
- Very good of 'once through' application and 'boundary lubrication'
